110m²

Crew Size: Four
(4)

Templates Used:
Herringbone
Stacked Brick
Border

Coatings:
SP75
Terracotta
Slate

Other Equipment Used:
Large and Small
Vibratory Plates
Pressure Pot
Sprayer
Electric Mixer

The **City of Mitcham** isolated the intersection of Winston Avenue (Main Road) and Bennet Avenue as a Black Spot Zone that needed treatment.

StreetPrint provided a visual traffic calming solution to this threshold treatment in a timely, cost effective manner with minimal disruption to traffic.

The intersection was profiled 50mm prior to the application of **StreetPrint**.

One full day of access to the site was made available with a separate asphalt crew laying a 50mm A/C 10 in front of the **StreetPrint** crew.

Careful preparation was required to work in conjunction with the paving crew with quick accurate layouts and speed of printing application to utilize the retained asphalt temperature.

Two coats of SP75 in Terracotta to the main Herringbone Pattern and Slate Colourant to the border has provided an aesthetically pleasing finish for the local residents and most importantly a traffic calming threshold for the intersection.
